- Follow the link from my home page
- From 21 March 2003

# Overview

- Eurocode 3
  - Current status
  - Coverage
- Pitfalls
  - Major and minor differences with BS5950
- Element Design
  - Beams, Struts
- Capacity comparisons

## EC3 Current Status

PRÉNORME EUROPÉENNE  
EUROPÄISCHE VORNORM

5 June 2002

UDC

Descriptors:

English version

Eurocode 3 : Design of steel structures

**Part 1-1 : General structural rules and rules for buildings**

Calcul des structures en acier

Bemessung und Konstruktion von Stahlbauten

Partie 1-1 : Règles générales et règles  
pour ingénierie du bâtiment

Teil 1-1 : Allgemeine Bemessungsregeln und  
Regeln für Hallen und Geschöbauten

### Stage 34 draft

Amendments sent prior to the CEN TC 250 / SC 3 meeting in Vienna are highlighted by yellow colour.

Amendments made during the CEN TC 250 / SC 3 meeting in Vienna are highlighted by light blue colour.

This document is a merger of the stage 34 drafts prEN 1993-1-1  
and prEN 1993-3 both dated 1 May 2002

# E-SCI News March 2003

## Eurocode News

The timetable for the final run-up to the publication and implementation of EN1993 (EC3) is now fixed. The final drafts of the five Parts of EC3 needed for building design are now agreed. So the mandatory use of these codes is now in sight. What is the SCI doing to help

21/03/2003

5

## Eurocode terminology

- EN – EuroNorm
  - mandatory standard
- ENV – EuroNorm Voluntaire
  - You can use it if you wish
- DD – Draft for development
- DC – Draft for public comment
- prEN
  - Pre-EuroNorm between DD and EN

21/03/2003

Manchester Centre for Civil & Construction Engineering

6

## EC3 Current Published Status

- **DD ENV 1993-1-1:1992** Eurocode 3. Design of steel structures. General rules and rules for buildings (together with United Kingdom National Application Document)\_
- **DD ENV 1993-1-2:2001** Eurocode 3. Design of steel structures. General rules. Structural fire design (together with United Kingdom National Application Document)
- **DD ENV 1993-1-3:2001** Eurocode 3. Design of steel structures. General rules. Supplementary rules for cold formed thin gauge members and sheeting

## Other EC's Published Status

- **prEN 1994-1-1:2002** Design of composite steel and concrete structures. Part 1.1 General rules and rules for buildings. Stage 49 Examination Document
- **DD ENV 1998-3:1997** Eurocode 8: Design provisions for earthquake resistance of structures. Towers, masts and chimneys

# Potential pitfalls

- Terminology
  - Restricted vocabulary
- Change in symbols
  - More logical symbol name conventions
  - Lots of subscripts
- Changes in values
  - Young's Modulus etc
- Multiple documents
  - Need to consult more than one part

# Terminology

## BS5950

- Force
- Capacity
  - $M_c$
- Design strength
  - $p_y$
- Dead load
- Live load
- Wind load

## EC3

- Action
- Resistance
  - $M_{c,Rd}$
- Yield strength
  - $f_y$
- Permanent load
- Variable load
- Another variable load

# Terminal...ogy

BS5950 in wonderland

EC3

- Words evolved over time
- Inconsistent at times
- No link with concrete structural codes
- Vocabulary consistent with meaning
- Consistent across all Eurocodes
- Easy to translate

## Symbols

	BS5950	Eurocode
Elastic Modulus	$Z$	$W_{el}$
Plastic Modulus	$S$	$W_{pl}$
Radius of Gyration	$r$	$i$
Torsion constant	$J$	$I_t$
Warping constant	$H$	$I_w$

# Changes in Values

- Young's Modulus
  - BS - 205000 N/mm<sup>2</sup>
  - EC - 210000 N/mm<sup>2</sup>
- Shear modulus
  - BS – 79000 N/mm<sup>2</sup>
  - EC - 81000N/mm<sup>2</sup>
- Changes in load factors
  - BS 1.4Gk + 1.6 Qk
  - EC 1.35Gk + 1.5 Qk
- Many extra load combinations in EC
  - Main variable action
  - Secondary variable action

## Axes redefined in Eurocode

- Major axis is y-y
- Vertical axis is z-z
- X direction is along the member
- This is consistent with most FE and Frame analysis software

EC3 Definitions

## BS Section classification

$$\varepsilon = (275/p_y)^{0.5}$$

		Class 1 plastic	Class 2 compact	Class 3 semi-compact
Rolled section	$b/T$	$9\varepsilon$	$10\varepsilon$	$15\varepsilon$
Welded section	$b/T$	$8\varepsilon$	$9\varepsilon$	$13\varepsilon$
Compression due to bending	$b/T$	$28\varepsilon$	$32\varepsilon$	$40\varepsilon$

21/03/2003

Manchester Centre for Civil & Construction Engineering

15

## prEN1993 Classification

Rolled sections

- Different outstand
- Different  $\varepsilon$

$$\varepsilon = (235/f_y)^{0.5}$$

Class	Part subject to compression
Stress distribution in parts (compression positive)	
1	$c/t \leq 9\varepsilon$
2	$c/t \leq 10\varepsilon$

21/03/2003

Manchester Centre for Civil & Construction Engineering

16

## Multiple documents

- The DD ENV 1993:1-1 contained all the information in one 300 page document. It also contained the National Application Document
- prEN1993-1-1 Contains member and frame design but omits fasteners
- prEN1993 must be read in conjunction with the UK National Annex

## Element Design

- Beams
  - Moment capacity/resistance
  - Shear
  - Deflections
- Compression members
- Lateral Torsional Buckling

# Moment Resistance

## BS5950

- Class 1 and 2
  - $M_c = p_y S$
- Class 3 semi-compact
  - $M_c = p_y Z$  or  $M_c = p_y S_{eff}$
- Class 4 slender
  - $M_c = p_y Z_{eff}$
- Low shear
  - $F_v < 60 \% P_v$

## EC3

- Class 1 and 2
  - $M_{c,Rd} = f_y W_{pl} / \gamma_{M1}$
  - $\gamma_{M1} = 1.05$  in UK
- Class 3
  - $M_{c,Rd} = f_y W_{el,min} / \gamma_{M1}$
- Class 4
  - $M_{c,Rd} = f_y W_{eff,min} / \gamma_{M1}$
- Low shear
  - $V_{Ed} < 50\% V_{pl,Rd}$

# Shear Resistance

## BS5950

- $P_v = 0.6 p_y A_v$
- Shear area
  - $A_v = tD$
- Shear buckling if
  - $d/t > 70\epsilon$

## EC3

- $V_{pl,Rd} = A_v (f_y / \sqrt{3}) / \gamma_{M1}$
- Shear area
  - $A_v = A - 2bt_f + (t_w + 2r)t_f$
  - Approx =  $1.04tD$
- Shear buckling if
  - $h_w/t_w > 72\epsilon$

# Deflections

BS5950

## ● Serviceability LS

- Imposed load only
- Span/360 - brittle
- Span/200 - generally

EC3 ? EN1990

## ● Serviceability LS

- Permanent action,  $\delta_1$
- Variable action,  $\delta_2$
- Pre-camber,  $\delta_0$
- $\delta_{\max} < L / 250$
- $\delta_2 < L / 350$  brittle
- $\delta_2 < L / 300$  generally

# Deflections

BS5950

## ● Serviceability LS

- Imposed load only
- Span/360 - brittle
- Span/200 - generally

EC3 ? EN1990

## ● Serviceability LS

- Permanent action,  $\delta_1$
- Variable action,  $\delta_2$
- Pre-camber,  $\delta_0$
- $\delta_{\max} < L / 250$
- $\delta_2 < L / 350$  brittle
- $\delta_2 < L / 300$  generally

# Compression Members

- $P_c = A g p_c$  from Tables 23 and 24
- $p_c$  is a function of  $\lambda$
- BS5950 requires a large number of tables
- $N_{b,Rd} = \chi A f_y / \gamma_{M1}$
- $\chi$  is a reduction factor
- $\chi$  depends on
  - $\bar{\lambda}$  non-dimensional slenderness
  - Perry-Robertson approach

## Compression members

$$N_{b,Rd} = \mathbf{c} \mathbf{b}_a A f_y / \mathbf{g}_{M1}$$

$$\chi = \frac{1}{\phi + \left[ \phi^2 - \bar{\lambda}^2 \right]^{0.5}} \quad \text{but} \quad \chi \leq 1$$

$$\phi = 0.5 \left[ 1 + \alpha \left( \bar{\lambda} - 0.2 \right) + \bar{\lambda}^2 \right]$$

$$\bar{\lambda} = \left[ \mathbf{b}_a A f_y / N_{cr} \right]^{0.5} = l / l_1, \quad l_1 = \mathbf{p} \sqrt{E / f_y}$$

# Compression members

Figure 6.3: Buckling curves

## Example

- UC 203x203x60 of grade S275 is axially loaded and pinned at each end of its 6m length.
- $A = 76.4 \text{ cm}^2$ , flange thickness,  $t_f = 14.2\text{mm}$ , radius of gyration about minor axis,  $i_{zz} = 5.2 \text{ cm}$ , depth,  $h = 209.6\text{mm}$ , width  $b = 205.8$   $h/b = 1.01 \Rightarrow$  H section
- **Table 3.1:**  $t_f = 14.2\text{mm} < 40\text{mm}$  therefore  $f_y = 275\text{N/mm}^2$  for S275 grade
- $E = 210000 \text{ N/mm}^2$
- Slenderness -  $\lambda_{zz} = 600/5.2 = 115 < 180$  OK
- $\beta_a = 1.0$ , implies  $\lambda_1 = \pi(E/f_y)^{0.5} = 86.8$
- $(\lambda_{zz}/\lambda_1) \beta_a^{0.5} = 115/86.8 = 1.324 \leftarrow ?$

Figure 6.3: Buckling curves

21/03/2003

27

## Example

● UC 203x203x60 of grade S275 is axially loaded and pinned at each end of its 6m length.

● Figure 6.3 factor,  $\chi = 0.38$

●  $N_{bRd} = 0.38 \cdot 1.0 \cdot 76.4 \cdot 10^2 \cdot 275 / 1.05$   
**= 760kN**

203x203x86	$P_{cx}$	2920	2920	2870	2810	2750	2690	2610	2450	2260	2050
203x203x71	$P_{cx}$	2380	2250	2110	1970	1820	1660	1500	1190	941	748
203x203x60	$P_{cx}$	2100	2100	2060	2020	1970	1920	1860	1740	1590	1420
203x203x52	$P_{cx}$	2080	1960	1840	1710	1570	1430	1280	1010	786	622
	$P_{cy}$	1820	1820	1790	1750	1710	1660	1620	1510	1370	1220
	$P_{cy}$	1800	1700	1590	1480	1360	1230	1110	868	678	536

BS5950 – 786kN

21/03/2003

28

# But

- EC loads are typically 5% lower than BS
- Scaling the capacity by this figure gives:
- $EC3 = 760/0.95 = 800 \text{ kN}$
- EC3 stronger than BS at 786 kN

## LTB BS5950:2000

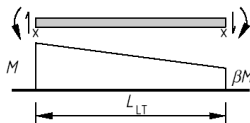

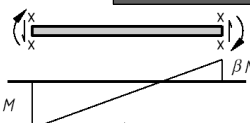

- $M_x \leq M_b/m_{LT}$  and  $M_x \leq M_{cx}$
- $M_b = p_b \times \text{modulus}$
- $p_b$  from  $\lambda_{LT}$
- $\lambda_{LT} = uv\lambda\sqrt{\beta_w}$
- Class 1 & 2:  $\beta_w = 1.0$
- Class 1 & 2:  $M_b = p_b S_x$

# LTB BS5950:2000

- $M_x \leq M_b/m_{LT}$  and  $M_x \leq M_{cx}$
- $M_b = p_b \times \text{modulus}$
- $p_b$  from  $\lambda_{LT}$
- $\lambda_{LT} = uv\lambda/\beta_W$
- $M_b = p_b S_x$

## BS 5959 Table 18 $m_{LT}$

Segments with end moments only (values of $m_{LT}$ from the formula for the general case)		$\beta$	$m_{LT}$

# EC3 LTB

1.0 For UB, UC

- Same approach as for Compression

$$M_{b.Rd} = c_{LT} b_w W_{pl.y} f_y / g_{M1}$$

$$c_{LT} = \frac{1}{f_{LT} + [f_{LT}^2 - \bar{I}_{LT}^2]^{0.5}}$$

1.05

$$f_{LT} = 0.5 \left[ 1 + \alpha_{LT} (\bar{I}_{LT} - 0.2) + \bar{I}_{LT}^2 \right]$$

21/03/2003

Manchester Centre for Civil & Construction Engineering

35

# EC3 LTB

$$f_{LT} = 0.5 \left[ 1 + \alpha_{LT} (\bar{I}_{LT} - 0.2) + \bar{I}_{LT}^2 \right]$$

$\alpha_{LT} = 0.34$  for rolled UC sections

$\alpha_{LT} = 0.49$  for rolled UB sections

The non-dimensional slenderness

$$\bar{I}_{LT} = \sqrt{M_{pl.Rd} / M_{cr}}$$

$$M_{cr} = C_1 \frac{p^2 EI_z}{L^2} \sqrt{\frac{I_w}{I_z} + \frac{L^2 GI_t}{p^2 EI_z}}$$

Where  $C_1$  results from the bending moment diagram

21/03/2003

Manchester Centre for Civil & Construction Engineering

36

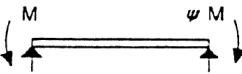

# EC3 LTB

## ● Moment factor, $C_1$ loaded between restraints

Loading and support conditions	Bending moment diagram	Values of k	Val
			$C_1$
		1,0	1,132
		0,5	0,972
		1,0	1,285
		0,5	0,712

# EC3 LTB

## ● Moment factor, $C_1$ due to end moments

Loading and support conditions	Bending moment diagram	Value of k	Val
			$C_1$
	$\psi = +1$ 	1,0	1,000
		0,7	1,000
		0,5	1,000
	$\psi = +\frac{1}{2}$ 	1,0	1,323
		0,7	1,473
		0,5	1,514
	$\psi = 0$ 	1,0	1,879
		0,7	2,092
		0,5	2,150

Same curves as before!

Figure 6.3: Buckling curves

## Example

- Uniform moment – unbraced length 3m
- UB 610x229x140 S275
- BS  $M_b = 1100$  kNm
- EC3  $M_{b,Rd} = 960$  kNm
- For comparison scale by  $1/0.95$ 
  - $M_{b,Rd} \text{ scaled} = 1010$  kNm < than BS

# Summary of LTB

- BS5950 splits calculations between strength and equivalent moment
- EC3 combines equivalent moment and section properties to give a reduction factor
- EC3 uses EXACT same buckling curves for LTB and Strut buckling
- EC3 look awful but is easily programmed in a spreadsheet

# Conclusions

- Eurocodes are not that difficult
- They are just a little different
- Rationalises terminology across materials and countries
- The EFTA region is 10 times bigger than UK
- Eurocodes are not going to go away this time

# Questions??

1. How quickly will the take up be in the UK?

Ans: It should be quicker than the switch from BS449 to 5950 was since both EC3 and BS5950 are limit states codes. EC3 will become mandatory.

2. What does EC3 say about effective lengths?

Ans: The EC3 guidance is not as helpful as BS5950 Table 22. EC3 gives the general approach for effective lengths in frames which results in the same values as Table 22

21/03/2003

43

# Questions??

1. **How is Europe progressing with using EC3?**

Ans: The German speaking countries have already adopted the DDENV as a DIN. Benelux countries are well advanced. The rest are planning the implementation.

2. **What's in EC3 about sway,  $\lambda_{crit}$  etc?**

Ans: There is a lengthy section in the prEN on frame stability. On initial viewing, this looks very like the BS5950:2000 approach. See Section 5 of the prEN for the full details

21/03/2003
